

SolidRun's HummingBoard™ family:  
**SR-HummingBoard-MX6**  
(ARM-Cortex-A9)

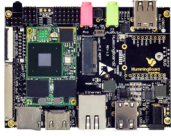

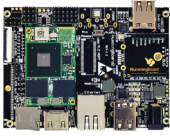

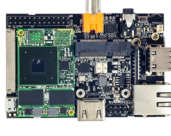

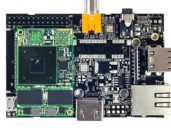

## *Fly High With Your Ultimate IoT Platform*

- » **Mix & Match** – Choose the model that's right for you. You can choose your SolidRun SOM and match it to each HummingBoard you wish.
- » **Connect to anything**, if that's your dream – A wide variety of connectivity options.
- » **All the reliability you need** – The highest quality components, no moving parts.
- » **Reduce** Time to Market, Design Risk and Cost

Get ready to fall in love with the HummingBoard family – small and powerful, low-cost ARM computers that ignite the imagination. Whatever your dream is, the HummingBoard will help make it happen – the possibilities for creating the next great IoT innovation are truly limitless.

The HummingBoard allows you to run many open source operating systems – such as Ubuntu, Debian and Arch – as well as Android and XBMC. With its core technology based on SolidRun's state-of-the-art Micro System on a Module (SOM), it has ready-to-use OS images, and its open hardware comes with full schematics and layout. Best of all, as a Linux single board computer, the HummingBoard is backed by the global digital maker community, which means you can alter the product in any way you like and get full kernel upstreaming support and all the assistance you need.

(\*\*) 1000 Mbps link is limited to 470Mbps actual bandwidth due to internal chip buses limitations.

## Applications:

Fleet Control

Medical Usages

Digital Signage

Gaming

Automotive

Smart Home
